

# KEEPS YOU CONNECTED

## MIC-KEY\* Feeding Tube Extension Sets with ENFit<sup>†</sup> Connectors

To comply with the International Organization for Standardization (ISO) in the prevention of wrong route delivery of fluids and gases, Halyard will be commencing a phased release of its NEW ENFit<sup>†</sup> feeding tubes from June 2016. Halyard will start with the most commonly used product in the market, the MIC-KEY\* range of gastrostomy tubes. This will be followed by the transgastric-jejunal and jejunal feeding tubes. For MIC-KEY\* products, only the extension sets (continuous and bolus), not the products, will change.▲

To ensure a smooth transition to ENFit<sup>†</sup> devices, Halyard will make the ENFit<sup>†</sup> Transition Connector available. This will enable you to manage the transition from your current MIC-KEY users.

We are here to assist you. For more information please visit [www.halyardhealth.com.au](http://www.halyardhealth.com.au) OR contact your local HALYARD Account Manager.

▲For Halyard MIC\* enteral feeding tubes, the products will change to have male connector on the feeding tube and medication ports.

Please see product information for the NEW Halyard ENFit<sup>†</sup> enteral feeding tubes. Halyard will provide you with additional product information in the coming months.
