HALYARD, YOUR PARTNER IN COMPLIANCE TO THE MASK STANDARD

AS 4381:2015 IS THE STANDARD FOR SINGLE-USE FACE MASKS

Studies show that fluid strikes the face area of OR staff an average 45–51% of the time.¹ Surgeons are particularly at risk, with 90% not aware they've been splashed.²

This puts you, your staff and your patients at considerable risk.

NEW STANDARD AS 4381:2015 (RED INDICATES CHANGE)

CHARACTERISTICS	LEVEL 1 1	LEVEL 2 2	LEVEL 3 3	TEST METHOD
	Level 1 barrier medical face mask materials are evaluated for resistance to penetration by synthetic blood at the minimum velocity specified in Table 2, bacterial filtration efficiency and differential pressure. APPLICATIONS: For general purpose medical procedures, where the wearer is not at risk of blood or bodily fluid splash or to protect staff and/or the patient from droplet exposure to microorganisms (e.g. patient with upper respiratory tract infection visits GP)	Level 2 barrier medical face mask materials are evaluated for resistance to penetration by synthetic blood at the middle velocity specified in Table 2, bacterial filtration efficiency and differential pressure. APPLICATIONS: For use in emergency departments, dentistry, changing dressings on small or healing wounds where minimal blood droplet exposure may possibly occur (e.g. endoscopy procedures)	Level 3 barrier medical face mask materials are evaluated for resistance to penetration by synthetic blood at the maximum velocity specified in Table 2, bacterial filtration efficiency and differential pressure. APPLICATIONS: For all surgical procedures, major trauma first aid or in any area where the health care worker is at risk of blood or bodily fluid splash (e.g. orthopaedic, cardiovascular procedures)	
Bacterial Filtration Efficiency (BFE) %	≥ 95%	≥ 98%	≥ 98%	ASTM F2101-14 or EN 14683:2014

TEST METHODS FOR FACE MASKS

BACTERIAL FILTRATION EFFICIENCY (BFE) AT 3µm: ASTM F2101

Determines the bacterial filtration efficiency (BFE) of various filtration materials. This test employs a ratio of the bacterial challenge counts to sample effluent counts to determine the percent bacterial filtration efficiency (%BFE). The test procedure allows a reproducible bacterial challenge to be delivered to test materials, and provides a standard procedure for comparison of filtration materials.

The higher the BFE, the better the filtration efficiency, the better the protection.

DIFFERENTIAL PRESSURE OR BREATHABILITY (DELTA P): 4.4.1.2 of MIL-M-36954C

Determines the air exchange differential of porous materials measured in mm H₂O/cm². This technique employs a water manometer differential upstream and downstream of the test material at a constant flow rate.

**The lower the delta P, the more breathable the material is.
However, this can also mean lower levels of protection.**

FLUID RESISTANCE: ASTM F 1862

Standard Test Method for Resistance of Medical Face Masks to Penetration by Synthetic Blood (Horizontal Projection of Fixed Volume at Known Velocity).

Developed to simulate a challenge to the fluid splash resistance of a face mask under conditions similar to actual use. During this test, face masks are insulted with synthetic blood, and graded as a pass or fail. The masks are evaluated at three pressures: 80, 120, and 160mmHg.

The higher the pressure at which a mask passes, the greater the fluid resistance.

NATIONAL INSTITUTE FOR OCCUPATIONAL SAFETY AND HEALTH (NIOSH) Certification for Particulate Respirators: 42 CFR 84 Certified in USA

NIOSH Certification ensures the respirator has undergone the stringent testing and quality assurance requirements to meet an expected level of protection.

If a respirator has been NIOSH-certified, it will have the following markings on the respirator's packaging, user instruction insert, and/or on the respirator itself:

- The NIOSH name or logo;
- The NIOSH filter classification – in this case "N95";
- The NIOSH test and certification – or TC – approval number;
- The Approval Holder's business name (usually the manufacturer), registered trademark, or an easily understood abbreviation;
- The model or part number; and
- The manufacturing lot number.

The respirators certified under the NIOSH 42 CFR 84 regulation are tested under much more demanding conditions, providing a higher level of worker protection.

EXAMINATION GLOVES

THE WORRY-FREE CHOICE FOR EVERYONE, EVERYWHERE

Your hands are essential to the care you provide to your patients. With 5–15% of healthcare workers susceptible to latex allergy, caring for you and your hands by reducing the exposure to latex reduces the risks and harmful effects of an allergic reaction¹.

Halyard has created a patented, natural rubber latex-free glove to provide you with the comfort, fit and sensitivity of latex, without the added risk of exposure.

It's the one glove for all your non-surgical needs, facility-wide².

INNOVATION IN PACKAGING TO REDUCE CROSS CONTAMINATION AND WASTE

As part of our commitment to reducing the risk of HAIs, Halyard introduced the SmartPULL* glove dispensing system to our STERLING* and LAVENDER* Nitrile Exam Glove boxes.

Our advanced packing technology has also reduced the waste in storage space with the larger, 200–250 count per box providing you with more for less.

The smaller tab reduces the risk of contamination and waste by limiting the contact and potential fall-out from adjacent gloves.

The larger tab enables easier access as the box empties.
